## Executive Summary

## Enterprise-Grade Cybersecurity Solutions for Small and Medium Businesses

The business world is struggling to protect networks, computers, programs and data from malicious attacks and unauthorized access by hackers and cyber criminals. Analyst reports show that over fifty percent of SMBs in the United States experienced a cyber-attack during the past year and it is estimated that sixty percent of these companies will go out of business as a result of hacking attacks and data breaches.

### OUR MISSION

Cyberbox delivers enterprise grade cybersecurity to protect Small and Medium businesses (SMBs) from cyber attacks and threats.

### MARKET NEED

Current cybersecurity solutions are built to protect large scale business enterprises and public organizations and are not suitable for deployment in most SMBs.

- **Costly Investment:** Enterprise-grade cybersecurity solutions involve costly licensing, substantial setup investment and high maintenance costs.
- **Technical Expertise:** Sophisticated security systems require skilled and experienced IT experts who are difficult to recruit and are a heavy burden on payroll expenses.
- **Protection Capabilities:** High-end solutions include a wide range of protection capabilities that are simply not available in low-end firewall and anti-virus solutions.

### OUR SOLUTION

Cyberbox delivers an on-premise device with fully automated security protection for SMB networks and connected devices. Our solution enables SMBs to deploy a fully automated cyber security solution without the expense and hassle of high end cybersecurity solutions. The Cyberbox solution also offers flexible pricing models to suit business needs and budgets.

### CUSTOMER BENEFITS

Cyberbox is easy to install, simple to operate and does not require in-house IT specialists for ongoing maintenance. Our solution offers enterprise-grade cybersecurity including real-time alerts and notifications to protect employee network devices and customer data.
